

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

1. (Currently Amended) A method for discharging a liquid material comprising:
discharging a liquid material onto a substrate from a discharging apparatus having a discharging head which discharges the liquid material; and
providing an ionized wind onto the substrate before the discharging of the liquid material onto the substrate, and at least after the discharging of the liquid material onto the substrate, wherein the liquid material is made of easily chargeable constituent elements.
2. (Currently Amended) The discharging method for a liquid material according to claim 1, wherein said the substrate includes ~~comprises~~ a plurality of easily chargeable constituent elements, ~~and~~
~~wherein the discharging method further comprises providing the ionized wind on the substrate before discharging the liquid material.~~
3. (Currently Amended) The discharging method for a liquid material according to claim 2, wherein at least one of said the easily chargeable constituent elements is an active element.
4. (Cancelled)
5. (Currently Amended) The discharging method for a liquid material according to claim ~~[[4]]~~ 1, wherein said the liquid material composed of said the easily chargeable ~~material~~ constituent elements is a metal wiring material.

6. – 8. (Cancelled)

9. (Currently Amended) A discharging apparatus for a liquid material comprising:
a substrate holding part for holding a substrate;
a discharging head for discharging the liquid material onto ~~said~~ the substrate; and
an ionized wind producing unit for providing an ionized wind onto ~~said~~ the substrate,
wherein
said the liquid material is an easily chargeable material; and
said the ionized wind producing unit provides said the ionized wind onto the substrate, at
least after ~~said the~~ discharging head discharges the liquid material onto the substrate.

10. (Cancelled)

11. (Currently Amended) An electronic device in which one part of a constituent element is formed using ~~[[a]] the discharging apparatus method~~ according to claim 1.

12. (Currently Amended) An electronic device in which at least one part thereof is made using a discharging apparatus of a liquid material ~~according to claim 8, the discharging apparatus comprising:~~

a substrate holding part for holding a substrate which includes easily chargeable constituent elements;
a discharging head for discharging the liquid material onto the substrate; and
an ionized wind producing unit for providing an ionized wind on the substrate, at least after the discharging head discharges the liquid material onto the substrate.
